HR ANALYTICS DASHBOARD REPORT

By- Yukti (BT food tech- 500110658)

1. Introduction

This project focuses on analyzing an HR dataset using Tableau to gain insights into employee-related data. The aim of this analysis is to understand workforce distribution, employee demographics, and attrition trends through interactive data visualization. By converting raw data into meaningful charts, the project helps in identifying patterns that are useful for HR decision-making.

2. Objectives

The main objectives of this project are:

- To analyze employee distribution across departments
- To study gender diversity within the organization
- To identify attrition patterns among employees
- To understand age group distribution
- To examine salary variation across employees

3. Dataset Description

The dataset used in this project is an HR dataset containing information about employees. It includes attributes such as:

- Employee ID
- Age
- Gender
- Department
- Salary
- Attrition

This data helps in analyzing workforce structure and identifying trends related to employee retention and demographics.

4. Tools and Technology

The following tools were used in this project:

- Tableau- for creating dashboards and visualizations
- Microsoft Excel- for dataset storage

- GitHub- for project sharing and version control

5. Dashboard Description

The HR Analytics Dashboard consists of multiple visualizations combined into a single interactive interface. The key components of the dashboard include:

- **Employee Count:** Displays the total number of employees in the organization
- **Gender Distribution:** Shows the ratio of male and female employees
- **Department Analysis:** Highlights the number of employees in each department
- **Attrition Analysis:** Represents employees who have left the organization
- **Age Distribution:** Shows how employees are distributed across different age groups
- **Salary Distribution:** Provides insights into salary patterns

These visualizations are arranged in a structured dashboard layout for easy interpretation.

6. Key Findings / Analysis

Based on the dashboard, the following insights were observed:

- A significant number of employees are concentrated in certain departments, indicating uneven workforce distribution
- Attrition is present and may be higher in specific categories, which could require further investigation
- Gender distribution shows imbalance, suggesting scope for improved diversity
- Most employees fall within a mid-age group, indicating a relatively young workforce
- Salary distribution varies across employees, reflecting differences in roles and experience levels

7. Advantages of Dashboard

- Provides a clear and visual understanding of HR data
- Helps in quick decision-making
- Identifies patterns and trends easily
- Makes complex data simple to interpret

8. Conclusion

The HR Analytics Dashboard successfully transforms raw HR data into meaningful insights using Tableau. It highlights important aspects such as employee distribution, attrition trends, and demographic patterns. This dashboard can be a useful tool for HR professionals to improve workforce planning, employee retention strategies, and organizational decision-making.

10. Future Scope

- Add more data such as performance metrics
- Include predictive analysis for attrition
- Enhance dashboard interactivity with filters
